ANN ARBOR, April 30, 1892.

To *Eli W. Moore, Pres. of Board of Health:*

In accordance with usage, I herewith present the annual report of the Health Officer to this Board. I respectfully report that the city is almost free from contagious diseases. There are but two cases of diphtheria now in the city, which indicates that the disease is nearly if not wholly under control. The death rate from diphtheria is less than the usual average per cent of other cities of the same size. Prompt reports from physicians generally, prompt and efficient service of the

police force in placarding infected premises and efficient supervision in fumigating, has done much to check the spreading of the disease, and much credit is due those officials for their efficiency. There have been but few cases of scarlet fever, with slight mortality. There has not been any prevalence of epidemics of other diseases. The number of complaints of nuisances to the Health Officer was enormous and nearly all of said nuisances have been abated or corrected. The health of the city depends much on keeping the surface of the city clean. I would respectfully urge your Board to bear in mind the fact that this cannot be accomplished without sufficient funds to warrant more frequent inspections of the various localities, that are more prone to become nuisances, particularly in the summer season. To abate many of the nuisances complained of it is necessary to adopt measures to secure a system of sewers.

The whole number of deaths in the city during the past year was 163. Old age and la grippe caused increase of death rate.

Respectfully,

JOHN KAPP,  
Health Officer.

Received and filed.

REPORTS OF STANDING COMMITTEES.  
STREET.

To the Common Council:

Your committee on street, to whom was referred the petition of J. T. Jacobs and others, praying among other things for the laying out of a street, through Tappan Park connecting south Thayer street with a street of the same name, laid down on the plat of Hamilton's addition to the city, respectfully report that the subject matter of such petition has been fully considered, and your committee would recommend that such petition be denied, that the opening and construction of the street purposed would be a great injury to Tappan Park addition and wholly without a substantial benefit to any one.

Your committee would recommend that the plat of Tappan Park be duly approved by this Council and that all of the streets and other public grounds indicated therein be accepted by the city and that no street other than such as are indicated on said plat be ordered

laid out or established, within the boundary of such plat.

Your committee further report that Mr. White, the proprietor of said Tappan Park addition appeared before your committee by Mr. White, his son, who at the suggestion of your committee readily and willingly agreed for and on behalf of his father, to deed and convey to the city without cost, lands for streets as follows:

First. A street 4 rods in width parallel with Street street from Packard street, to the south line of his, Mr. White's, land.

Second. A street, 4 rods in width extending Oakland avenue as laid down on Tappan Park plat to White street or Forest avenue; also

Third. A street extending Wood street to the south line of Hill addition to the city.

The deeds for all of which accompany this report.

That Mr. John R. Miner has delivered to the city a conveyance of land to extend such street running south from Packard street to the Hamilton addition.

Your committee would therefore recommend that such deeds be accepted and that streets be laid out and established on the lands thus conveyed.

All of which is respectfully submitted and your committee beg to be discharged from the further consideration of the subject.

WATER COMMITTEE.

*To the Common Council:*

Your Committee on Water, to whom was referred the petition of C. C. Clark and others praying for a fire hydrant on Observatory street and the extension of the water mains thereto, respect-

fully report that we have had the matter under consideration and would recommend that the prayer of said petition be granted, and that the Ann Arbor Water company be ordered to extend its six inch water mains six hundred (600) feet easterly on Ann street, and one hundred (100) feet southerly on Observatory street and place a fire hydrant thereat.

Your Committee beg leave further to report that during the month of June, 1891, the Ann Arbor Water company were ordered by this Council to extend its six inch water mains from Hill street to and connect with its mains on Washtenaw avenue, that the company disregarded the order of this Council in the premises and made such extension and connection with two inch pipe, which in the opinion of your Committee was practically worthless in case of needed protection from fire, and that such small pipe interferes with the flow of water, to the injury of the same for domestic purposes.

Your Committee would therefore recommend that the Ann Arbor Water company be ordered forthwith to take up such small pipe, and to comply with such original order, and that until such order is complied with no allowance be made for rental of the fire hydrants on Hill street.

Dated May 13, 1892.

Respectfully submitted,

LIGHTING COMMITTEE.

*To the Common Council:*

Your Committee on Lighting to whom was referred the petition of John S. Carroll and others praying among other things for the establishment of an arc electric light, on Ann street near Observatory street, respectfully report that they have had the subject matter of said petition under consideration and would recommend that such petition be denied, for the reason

that such light will interfere with the successful prosecution of the scientific work at the Observatory. Your Committee at first thought that this objection ought not to prevail, but after a careful consideration of the subject and from the uniform statement of all the gentlemen in charge of the work at the Observatory, your Committee can but find as a matter of fact that such light placed near to the Observatory would greatly interfere with the scientific work thereat, for which reason your Committee have concluded that such petition ought not to be granted; that if a light is a necessity at the point in question, then some other method must be found to provide the same for such locality. All of which is respectfully submitted.
